# About This Training Guide

---

## TRAINING GUIDE DESCRIPTION

---

This training guide examines how AFIS users create and maintain Vendor/Customer records and use the various tables in AFIS to store these records. Users will use documents to create and modify Vendor/Customer records as well as review the tables that are updated by these documents.

## TRAINING GUIDE OBJECTIVES

---

In this training guide, you will:

- Create and modify Vendor/Customer records
- Look up vendor information in tables and documents

---

# 1. Vendors and Customers Overview

---

## Learning Objectives

---

In this lesson, you will:

- Examine the structure of vendor and customer accounts in AFIS
- Examine the tables used to maintain vendor and customer accounts in AFIS

## Lesson Overview

---

In order for the State of Arizona to conduct business with a specific vendor or customer, the vendor or customer must be active and approved in the AFIS Vendor/Customer (VCUST) table. One person or business entity may serve as both a vendor and a customer to the State of Arizona, and the management of both types of records is done using Vendor/Customer Creation and Modification based documents.

### 1.1. Vendor/Customer Structure Overview

---

In AFIS, the same tables and documents are used to manage both vendors and customers. AFIS supports both centralized and decentralized maintenance of vendor and customer records. The key types of information captured in the AFIS Vendor/Customer data model are:

- Legal name/DBA
- 1099 tax information
- Address information (Payment, Ordering, Billing, etc.)
- Default disbursement options
- ACH information (vendor and address level)
- Prevent new spending control by Department
- Business Type information

The creation of Vendor/Customer records on the Vendor/Customer table is done using the Vendor/Customer Creation (VCC) based document codes listed below:

- **VCCD1** – Vendor/Customer Creation – Departments
- **VCCPZ1** – Vendor/Customer Creation – ProcureAZ
- **VCCG1** – Vendor/Customer Creation – GAO
- **VCCE1** – Vendor/Customer Creation – EFT

The modification of Vendor/Customer records on the Vendor/Customer table is done using the Vendor/Customer Modification (VCM) based document codes listed below:

- **VCMD1** – Vendor/Customer Modification – Departments
- **VCMPZ1** – Vendor/Customer Modification – ProcureAZ
- **VCMG1** – Vendor/Customer Modification – GAO
- **VCME1** – Vendor/Customer Modification – EFT

For customer records, both the VCC and VCM based documents may be used to relate the record to a one Billing Profile, to create a customer account. Billing Profiles are established by Departments on the Billing Profile (BPRO) table. Departments may require multiple Billing Profiles, and a single customer record may have multiple Billing Profiles associated with it either within a single Department and/or across multiple Departments. If more than one billing profile needs to be associated with a customer record, or the customer account information was not provided on the VCC or VCM documents, it is possible to establish the customer account directly on the Customer Account (CACT) table, by inserting a new record.

## 1.2. Vendor Customer Table

The Vendor/Customer (VCUST) table maintains information about all vendors and customers with whom the State of Arizona does business. Users can search for records on the VCUST table to determine if a specific Vendor/Customer has already been entered or needs to be created. The search results can be narrowed down by entering as much search criteria as is known.

The screenshot shows a search form with the following fields:

- Legal Name :
- Alias/DBA :
- Vendor/Customer :
- Taxpayer ID Number :  
- Last Name :
- Vendor Active Status :  
- Customer Active Status :  
- VSS Registered :  

Buttons: [Ok](#) [Clear](#) [Cancel](#)

Users can search by:

- **Legal Name** – The name of the person or business entity
- **Alias/DBA** – Another name for the person or business entity
- **Vendor/Customer** – A unique identifier for the record, typically a numeric value for Arizona.
- **Taxpayer ID Number** – The EIN or SSN/ITIN/ATIN number for the record
- **Last Name** – If the record belongs to an Individual it can be identified using their name
- **Vendor Active Status** – Used to search based on vendor status
- **Customer Active Status** – Used to search based on customer status

The VCUST table contains all of the primary information about the Vendor/Customer, and is broken down into several components. Some components contain multiple sections that group related fields

into an organized structure. Each component and section can be accessed using the Secondary Navigation Panel for the VCUST table. Within the table’s components and sections, certain fields are only active based on the information contained in other fields in the table. All of the information contained for a record on the VCUST can be added to or modified by using the VCC and VCM based documents by authorized users. (Most information can be added de-centrally; some information is only maintained centrally.)

## Vendor/Customer Component

The Vendor/Customer component contains the highest level of information for the currently selected account. It is broken down into several sections:

- **General Info** – Contains identifying information and high-level options for the account
- **Headquarters** – Contains fields that identify the account as a headquarters
- **Organization** – Contains general operational information about the organization, including Organization Type and 1099 reporting information
- **Disbursement Options** – Maintains the information needed to process payments, including the ability to prevent new orders against a vendor
- **Prenote/EFT** – Maintains the information about Prenote/EFT (Electronic Funds Transfer) status at the vendor level
- **Remittance Advice** – Maintains requirements for Remittance Advice notices at the vendor level
- **Vendor Terms** – Maintains default discount terms as offered by the vendor
- **Change Management** – Displays the creation dates, modification dates, approval dates, and comments for the record. All components contain a Change Management section

	Unit : <input type="text"/>

## Address Component

The Address component contains all of the address and contact information for the selected Vendor/Customer record. A Vendor/Customer can have multiple addresses configured, each with their own contact information. Each address is assigned an Address Type (Ordering, Billing or Payment), and a Vendor/Customer can have multiple addresses of the same type (i.e. more than one Billing address). If multiple addresses are assigned the same type, one can be selected as the Default Record for that type. Whenever a vendor is assigned on a document the Default Record is automatically selected.

Addresses and Contacts are assigned to a Headquarters Account, and can be originally added on the VCC based document or added to, modified or deleted, using the VCM based document.

▼ Address Information	
Address ID : AD001	Country Phone Code : 1
Street 1 : 7878 N. 16th Street,	Phone : 6028243737

CAGE Code :	
▶ Prenote/EFT	
▶ Remittance Advice	
▶ Contact Information	
▶ Contact Address Information	
▶ Geographic Designation	
▶ Change Management	

The Address component is broken down into several sections:

- **Address Information** – Contains the address information based on the Address ID selected
- **Prenote/EFT** – Maintains the information about Prenote/EFT status at the address level
- **Remittance Advice** – Maintains requirements for Remittance Advice notices at the address level
- **Contact Information** – Displays the contact information for the Principal Contact ID selected
- **Contact Address Information** – Displays the selected contact’s address information

## Other Components

The other components in the VCUST table contain additional information for the currently selected record.

- **Business Type** – Maintains a list of the Business Types that apply to a vendor, including their Small and Minority-Owned status
- **Service Area** – Maintains a list of the service areas or territories that apply to a vendor
- **Commodity** – Maintains a list of the commodities supplied by the vendor
- **Authorized Department** – Establishes a list of Departments that are authorized to use the Vendor/Customer
- **Prevent Spending** – Establishes a list of Departments that are prohibited from ordering from the vendor
- **Certification** – Displays the Active and Approved status for the Vendor/Customer

### 1.3. Customer Account Structure

---

Customers are individuals or business entities that purchase goods or services from the State of Arizona. Customer Accounts are determined by the combination of a Customer (Vendor/Customer) code and a Billing Profile code. Customer records are created and added to the VCUST table by using the VCC based documents. If a Customer record has already been created, a Customer Account can either created by using a VCM based document or through a direct update to the Customer Account Options (CACT) table.

## Customer Account Options

The Customer Account Options (CACT) table is used to establish and maintain billing options for customers. On the CACT table, users can view which Billing Profile codes have been assigned to each Customer code. One Customer code may have multiple Billing Profile codes assigned and each combination represents a unique Customer Account.

Customer	Name	Billing Profile	Department	Unit	Billing Type	Address ID

Customer Accounts can also be assigned to multiple Departments in AFIS by creating a Customer Account record for each Department that needs to use it. Records on the Customer Account Options table can be created and modified using the VCM based documents or directly in the Customer Account Options table (CACT).

## Customer Account Information

The Customer Account Information (CUSTA) query page is used to view balance information for Customer Accounts. Documents that reference a Customer Account by using a combination of the Customer code and Billing Profile update the balance information for that account on the CUSTA page.

## 2. Create a New Vendor/Customer Record

---

### Learning Objectives

---

In this lesson, you will:

- Examine the components of the Vendor/Customer Creation document
- Review the data entry requirements for the Vendor/Customer Creation document
- Create a Vendor/Customer Creation document
- Examine the process of using a Miscellaneous Vendor/Customer account
- Research the updates made to the Vendor/Customer table by the Vendor/Customer Creation document

### Lesson Overview

---

A Vendor Customer Creation (VCC) based document is used to create both new vendors and new customers. In AFIS, a vendor can also be a customer. The Vendor Customer (VCUST) table stores all of the information for both vendors and customers. This lesson examines the VCC based document components and data entry process.

### 2.1. Vendor/Customer Creation Document

---

The Vendor/Customer Creation (VCC) based documents allow users to add new records to the Vendor/Customer (VCUST) table, the 1099 Reporting Information (1099I) table, and the Customer Account Options (CACT) table. Only one Vendor/Customer record can be entered per document. Vendor/Customer Creation documents cannot reference any other document in AFIS, nor can they be referenced by any other document in AFIS.

Vendor/Customer Creation (VCCD1) documents that are created by Departments are routed to workflow for approval at the department level and at the GAO level before being submitted to Final. Once a VCC based document has been submitted to Final it cannot be modified or cancelled. Changes at that point require the creation and submission of a Vendor/Customer Modification (VCM) based document.

New records can be created for individuals or business entities that are only a Customer, only a Vendor, or both a Customer and Vendor. Depending on the entity's relationship to the State, the data entry requirements on the VCC based document vary in several important ways. For example, Ordering and Payment address types are used for Vendor records, while Billing address types are used for Customer records.

## Miscellaneous and Internal Vendor/Customer Accounts

A Miscellaneous Account does not represent a specific vendor or customer. The Miscellaneous Account can be used to create a document to record a one-time transaction. Selecting an existing Vendor/Customer code will infer the name and address information to a document. When a Miscellaneous Account is referenced, the name and address information has to be manually entered.

Both the Miscellaneous Account and Internal Account check boxes are located on the Vendor/Customer Creation (VCC) based document, in the Vendor/Customer component, on the Account Indicators tab.

## 2.2. Vendor Customer Creation Document Components

The Vendor Customer Creation (VCC) based document has many components, or sections, that relay detailed information to the Vendor Customer (VCUST) table. Some components are only used when creating a vendor, and other components are only used when creating a customer.

### Header

The Header section contains fields that allow the user to specify general information that applies to all sections of the document.

The screenshot displays the 'Vendor/Customer Creation - Department(VCCD1)' application window. The top status bar shows 'Dept: 100 ID: 201500000070 Ver.: 1 Function: New Phase: Draft' and 'Modified by Student1, 04/06/2015'. On the left is a 'Document Navigator' pane with a tree view containing: Header (selected), Vendor/Customer, Address, Customer Account, 1099 Reporting Information, 1042-S Reporting Information, Business Type, Service Area, Commodity, Authorized Dept., Prevent Spending, and Certification. The main content area is titled 'Header' and features a 'List View' button. Below the title are three tabs: 'General Information' (active), 'Extended Description', and 'Document Information'. The 'General Information' tab contains the following fields: 'Document Name' (text input with a dropdown arrow), 'Record Date' (text input with a calendar icon), 'Document Description' (text input with a dropdown arrow), and 'Never Archive' (checkbox).

### Vendor/Customer

The Vendor Customer section contains fields that allow the user to enter detailed information about the Vendor/Customer record, as well as to specify various account indicators such as a Miscellaneous Account, Third Party Vendor, or Third Party Customer options. The Accounts Receivable tab, although it relates to creating a Customer Record, only needs to be used when it is the intention to bill a customer through the Cost Accounting functionality. In this case a Cost Accounting Funding Type must be selected. The Disbursement Options tab is used when creating a vendor record.

## Address

The Address section contains fields that allow entry of the necessary address information for the Vendor/Customer. A vendor record requires at a minimum one Payment and Ordering Address Type be entered, which can be the same address. A customer record requires that a Billing Address Type be entered. If a record is both a vendor and a customer, all three Address Types must be entered. More than one of a particular address type can be entered, if for example, a vendor has more than one Payment address. The Address tab also allows users to insert contact information for each address type provided.

## Customer Account

The Customer Account section is only used when creating a new customer account record by assigning a Billing Profile, or specifying settings for a particular account that override settings on the Billing Profile, such as Suppress Billing or specifying any Third Party information for the customer account. Only one customer account can be established on the VCC based document. Additionally, customer accounts can be directly established on the Customer Account Options (CACT) table.

## 2.3. Vendor Customer Creation Document Data Entry

---

Vendor Customer Creation (VCC) based documents can be created by navigating to the Document Catalog and entering in the required information for the document. Depending on whether the record is for a vendor or a customer, different information will be required.

### Header

#### *General Information*

In the Header, General Information tab, the following fields are available:

- **Document Name** – Enter a name for the document, this field is optional
- **Document Description** – Enter a clear description of the document, this field is required
- **Extended Description** – Enter more description if necessary, this field is optional

### Vendor/Customer

#### *General Information*

In the Vendor Customer section, General Information tab, the following fields are available:

- **Vendor/Customer** – This field will be auto-generated for vendors. For customers only, the number can be assigned by the department, as an alternative to auto-generation. This field is required.
- **Legal Name** – This field is auto-populated once the document is saved with a name entered in the Company Name if a company, or First Name, Middle Name and Last Name fields, if an individual, on this tab
- **Alias/DBA** – Enter an alias for the Vendor/Customer, this field is optional
- **Organization Type** – Select either Individual or Company, this field is required
- **First Name** – Required if Organization Type selected is Individual; not used for Company
- **Middle Name** – Optional. Available for use only if Organization Type selected is Individual

- **Last Name** – Required if Organization Type selected is Individual; not used for Company
- **Company Name** – Required if Organization Type selected is Company; not used for Individual
- **Active From** – Select a future date on which the record becomes active, or able to be used. If left blank this field will default to the current date.

The screenshot shows the 'General Information' tab of a vendor customer record. The 'Vendor/Customer' field contains 'VC00000231'. The 'Organization Type' is set to 'Company'. The 'Auto Generate' checkbox is checked. The 'Legal Name' is 'Student 1'. The 'Company Name' is also 'Student 1'. The 'Active From' date is '10/07/2014'. Other fields like 'First Name', 'Middle Name', 'Last Name', 'Alias/DBA', 'Location Name', 'Department', and 'Unit' are empty. There are small green icons with arrows next to the Department and Unit fields.

### Headquarters

The Headquarters tab will almost always be left blank, in order to auto-generate a new Headquarters record for the vendor. Alternatively, a valid vendor customer code can be provided in the Headquarters Account Code field, to link the new vendor customer, child record, to a parent record.

### Account Indicators

The Account Indicators tab contains check boxes that turn on and off certain options for the account. One of the options on this tab is the check box for Miscellaneous Account which means that the record does not represent a specific vendor or customer. When using a Miscellaneous Account flagged Vendor or Customer account on documents, the user must manually enter the name and address information for the account.

Other possible options on this tab, include Third Party Vendor or Third Party Customer, which would be used to specify a vendor or customer as a Third Party.

The screenshot shows the 'Account Indicators' tab. It contains several checkboxes: 'Restrict Use by Department', 'Miscellaneous Account', 'Internal Account', 'Inventory Customer', 'PunchOut Enabled', 'Re-PunchOut Enabled', 'Electronic Order Enabled', 'Third Party Only', 'Third Party Vendor', 'Third Party Customer', 'W-9 Received', and 'Accepts Credit Cards'. The 'Restrict VSS Access' field is a dropdown menu currently set to 'Yes'.

### Organization

In the Organization section, the user enters the necessary taxpayer information into the available fields. The Taxpayer ID Number is required for vendors, with few exceptions, but not for customers that are not also vendors.

### Address

#### General Information

In the Address section, General Information tab, users can select the type of address they are entering. The user must first click **Insert New Line**. In the General Information tab, the user then selects an Address Type. Vendors require at least one Payment address and at least one Ordering address to be created for the record. Customers require at least one Billing address to be created for the record. Once an Address Type is selected, the information for that address is entered into the Address Information tab.

Each Address Type along with the corresponding information for the type is recorded on a new line in the Address section. If the record created designates both a vendor and a customer, then all three Address Types are required: Billing, Payment, and Ordering.

**Address Information**

For the Address Type selected on the General Information tab, the user enters information into the following required fields:

- **Address ID** – This field is auto-generated
- **Street 1** – Enter the street address of the vendor
- **City** – Enter the city for the vendor
- **State/Province** – Enter the state or province for the vendor
- **Zip/Postal Code** – Enter the zip code for the vendor
- **Country** – Enter the country for the vendor or select from the Pick List

### Prenote/EFT

The Prenote/EFT tab contains fields that are optional and specify EFT payment information for the vendor. The information on this tab will not be viewable.

### Contact Information

The Contact Information tab contains fields for specifying the contact information for a Principle Contact with the vendor or customer. For a customer record, the Principal Contact ID is auto-generated and the Principle Contact field is required. Additional information for the contact can also be entered if known.

### Contact Address Information

The Contact Address Information tab contains fields that will default based on the information in the Address Information section when the document is saved or validated, or if desired, different address information can be provided for the contact. A contact has to be added in order for the address information to default.

### Customer Account

The Customer Account section is only used when creating a customer account record. The following fields are required on the General Information tab:

- **Dept** – Enter the Department that will be associated with the customer account
- **Unit** – Enter the Unit code that will be associated with the customer account
- **Billing Profile** – Enter or select from the Pick List the Billing Profile for the customer account

The screenshot shows a software interface with two tabs: 'General Information' (selected) and 'Third Party Options'. The 'General Information' tab contains the following fields:

- Vendor/Customer: [Text Box]
- Address ID: [Text Box]
- Dept: [Text Box]
- Unit: [Text Box]
- Billing Profile: [Text Box]
- Billing Type: [Text Box]
- Billing Location: [Dropdown Menu]
- Bankruptcy:
- Suppress Billing:
- Suppress Past Due Billing:
- Suppress Auto Fin Charge:
- Dispute:
- Dispute Reason: [Text Box]
- Collection Cycle: [Text Box]
- Electronic File Type: [Dropdown Menu]
- File Prefix: [Text Box]
- Central Statement:

## Certification

In the Certification section, users must first click **Insert New Line**. In the Vendor Active Status field, the user then selects **Active**. In the Vendor Approval Status field, select **Complete**. If the record is for a customer the Customer Active Status and Customer Approval Status fields must also be set to **Active** and **Complete** respectively.

The screenshot displays a form titled "Certification Status" with a blue header bar. The form is organized into two columns. The left column contains three fields: "Vendor Active Status" with a dropdown menu set to "Active", "Vendor Approval Status" with a dropdown menu set to "Complete", and "Vendor Reinstatement Date" with a text input field and a calendar icon. The right column contains three corresponding fields: "Customer Active Status" with a dropdown menu set to "Active", "Customer Approval Status" with a dropdown menu set to "Complete", and "Customer Reinstatement Date" with a text input field and a calendar icon. The form has a light blue background and a thin border.

## 2.4. Create a New Vendor/Customer Record

A Vendor Customer Creation (VCC) based document can be created either by navigating to the Document Catalog, clicking Create, and entering the necessary information in the document fields or navigating to the VCUST table, and clicking the Create New Record link.

## ACTIVITY 2.4

### Create a New Vendor/Customer Record

#### Scenario

The State of Arizona wants to purchase 1000 new laptop computers from a new computer manufacturer, Dell. In addition, the State will be providing consultant services to Dell. Prior to creating a subsequent delivery order, Dell must be added to the VCUST table as a vendor. Furthermore, prior to receiving services from the State, Dell must be added to the VCUST table as a customer. The user must also determine that an entry does not already exist on the VCUST table prior to adding the entry.

#### Setup

- ✓ User is logged into the AFIS Home Page.

#### Steps

- A. Check whether the vendor is in the VCUST table.
  1. In the **Jump to** field, enter **VCUST**.
  2. Click **Go**.
  3. In the **Legal Name** field of the Search window, enter **Dell Computer\_xxx**, where xxx is your Student Number.
  4. Click **Ok**.
  5. Verify that Dell Computer is not returned.

Legal Name :  x      Last Name :

Alias/DBA :       Vendor Active Status :

Vendor/Customer :       Customer Active Status :

Taxpayer ID Number :       VSS Registered :

[Ok](#) [Clear](#) [Cancel](#)

- B. On the Same Vendor/Customer page, create a new Vendor/Customer record.
  1. At the bottom of the Vendor/Customer page, click the **Create New Record** link.

[Top](#)

CREATE DOCUMENT> [Create New Record](#) [Modify Existing Record](#)

2. On the Create Document page, select **VCCD1** as the document code.
3. In the **Document Department Code** field, enter the data from **your student data card information**.
4. Select the **Auto Numbering** check box.

5. Click the **Create Document** link.

C. Enter the appropriate data for the new Vendor/Customer document.

1. In the General Information tab of the Header, in the **Document Description** field, enter **Vendor data for Dell.**
2. In the Secondary Navigation Panel, click **Vendor/Customer**.

D. Enter the information about the new vendor.

1. In the General Information tab, select the **Auto Generate** check box.
2. From the **Organization Type** drop down menu, select **Company**.
3. In the **Company Name** field, enter **Dell Computer\_xxx**, where xxx is your Student Number.

4. Click the **Organization** tab.

E. Enter data about the 1099 Classification and the TIN.

1. From the **1099 Classification** drop down menu, select **Corporation**.
2. In the **Taxpayer ID Number** field, enter **265392xxx**, where xxx is your Student Number.
3. From the **Taxpayer ID Number Type** drop down menu, select **EIN**.

The screenshot shows the 'Organization' tab in the AFIS system. The '1099 Classification' dropdown is set to 'Corporation'. The 'Taxpayer ID Number' field contains '265392000'. The 'Taxpayer ID Number Type' dropdown is set to 'EIN'. Other visible fields include '1042-S Recipient Code', 'Number of Employees', 'Merchant ID', 'Sex', 'Date of Birth', 'Marital Status', 'Annual Income', 'Create Taxpayer ID', 'Re-Enter Taxpayer ID', 'IRS Country of Residence', 'IRS Country Sub Code', 'Contract Withholding Exempt', 'National Provider ID', 'CAGE Code', 'Detailed TIN Type', 'Foreign Tax ID', '1042-S Recipient Account Number', 'W-8 Form', 'Tax Profile', 'Tax Profile Name', 'EBIC Number', 'IAEC Number', 'Web Address http://', 'Employee ID', 'Employee Status', and 'Supplier Shared Secret'.

4. Click the **Vendor Terms** tab.

F. Enter data about discount terms established with the vendor.

1. To indicate the number of days that can occur between the Invoice Date and the disbursement in order to obtain the vendor discount, in the **Number of Days 1** field, enter **5**.
2. To indicate the discount applied to the disbursement, in the **Discount Percent 1** field, enter **5.0**.
3. To indicate that the discount always applies, even if the number of net days has passed, check the **Discount Always 1** check box.

The screenshot shows the 'Vendor Terms' tab in the AFIS system. The 'Number of Days 1' field is set to '5'. The 'Discount Percent 1' field is set to '5.0'. The 'Discount Always 1' checkbox is checked. Other visible fields include 'Number of Days 2', 'Discount Percent 2', 'Discount Always 2', 'Number of Days 3', 'Discount Percent 3', 'Discount Always 3', 'Number of Days 4', 'Discount Percent 4', and 'Discount Always 4'.

4. In the Secondary Navigation Panel, click **Address**.

- G. Select the appropriate address type.
1. Click the **Insert New Line** button.
  2. In the **Address Type** drop down menu, select **Ordering**.
  3. Check the **Default Record** check box.

The screenshot shows the 'Address Information' tab of the AFIS Vendor Customer form. The form contains the following fields and controls:

- Vendor/Customer:** A text input field.
- Address Type:** A dropdown menu with 'Ordering' selected.
- Division/Department:** A text input field.
- Additional Address Info.:** A text input field.
- Prevent New Spending:** An unchecked checkbox.
- Default Currency:** A dropdown menu.
- Active From:** A date picker field.
- Active To:** A date picker field.
- Default Record:** A checked checkbox.
- Mail Returned:** An unchecked checkbox.
- Bypass Address Validation:** An unchecked checkbox.

4. Click the **Address Information** tab.
- H. Enter the appropriate address data. For reporting purposes it is also good to fill in the county.
1. Check the **Auto Generate** check box.
  2. In the **Street 1** field, enter **1001 South IH 35**.
  3. In the **City** field, enter **Round Rock**.
  4. In the **State/Province** field, enter **TX**.
  5. In the **Zip/Postal Code** field, enter **78664**.
  6. In the **Phone** field, enter **512-728-4100**.

7. In the **Country** field, enter **USA**.

The screenshot displays the 'Address Information' tab in the AFIS system. At the top, there is a header bar with 'Address', 'Total Lines: 1', 'Address ID:', and 'Address Type:'. Below this is a table with columns: Address ID, Address Type, Street 1, City, State/Province, Zip/Postal Code, and Additional Address Info. The table contains one row. Below the table are navigation buttons: 'First', 'Previous', 'Next', and 'Last'. A 'List View' button is also present. The 'Address Information' tab is selected, showing the following fields:

- Address ID: [Field]
- Auto Generate:
- Street 1: 1001 South IH 35
- Street 2: [Field]
- City: Round Rock
- State/Province: TX
- Zip/Postal Code: 78864
- DUNS: [Field]
- Extended DUNS: [Field]
- CAGE Code: [Field]
- Country Phone Code: [Field]
- Phone: 512-728-4100
- Phone Extension: [Field]
- County: [Field]
- County Name: [Field]
- Country: USA

8. Click the **Contact Information** tab.

i. Enter key contact information.

1. Check the **Auto Generate** check box.
2. In the **Principal Contact** field, enter **Bob Smith**.
3. From the **Correspondence Type** drop down menu, select **EMail**.
4. In the **Email** field, enter **bobsmith@dell.com**.
5. In the **Phone** field, enter **512-728-4100**.
6. Click the **Contact Address Information** tab.
7. In the **Country** field, enter **USA**.

8. Click **Save**.

J. Since the Payment and Ordering addresses are identical, copy the Ordering address to start the Payment address.

1. Click the **Copy Line** button for the newly added Ordering address.
2. Click the **Insert Copied Line** button to add a duplicate address line to the document.
3. In the General Information tab, from the **Address Type** drop down menu, select **Payment**.
4. Click **Save**.

Address ID	Address Type	Street 1	City	State/Province	Zip/Postal Code	Additional Address Info.
AD001	Ordering	1001 South IH 35	Round Rock	TX	78664	
AD001	Payment	1001 South IH 35	Round Rock	TX	78664	

K. Since the Billing address is identical to the Payment and Ordering addresses, copy the Ordering address to start the Billing address.

1. Click the **Copy Line** button for the newly added Ordering address.

2. Click the **Insert Copied Line** button to add a duplicate address line to the document.
3. In the General Information tab, from the **Address Type** drop down menu, select **Billing**.
4. Click **Save**.

The screenshot shows the 'Address' management interface. At the top, it displays 'Total Lines: 3', 'Address ID: AD001', and 'Address Type: Billing'. Below this is a table with the following data:

Address ID	Address Type	Street 1	City	State/Province	Zip/Postal Code	Additional Address Info.
AD001	Ordering	1001 South IH 35	Round Rock	TX	78664	
AD001	Payment	1001 South IH 35	Round Rock	TX	78664	
AD001	Billing	1001 South IH 35	Round Rock	TX	78664	

Below the table, there are navigation buttons: 'From 1 to 3 Total: 3', 'First', 'Previous', 'Next', 'Last', and 'Go to line: [ ] Go'. A 'List View' button is also present.

The 'General Information' tab is active, showing the following fields:

- Vendor/Customer: VC00000262
- Address: Dell Computer\_300
- Address Type: Billing (dropdown)
- Division/Department: [ ]
- Additional Address Info.: [ ]
- Prevent New Spending:
- Default Currency: [ ]
- Active From: [ ]
- Active To: [ ]
- Default Record:
- Mail Returned:
- Bypass Address Validation:

5. In the Secondary Navigation Panel, click **Customer Account**.
- L. Create the customer account record.

1. Click **Insert New Line**.
2. In the **Dept** field, enter **ALL**.
3. In the **Unit** field, enter **ALL**.
4. In the **Billing Profile** field, enter **COST**.
5. In the **Billing Location** field, select **Customer Only**.

The screenshot shows the 'General Information' tab for a customer account record. The fields are as follows:

- Vendor/Customer: [ ]
- Address ID: [ ]
- Dept: ALL
- Unit: ALL
- Billing Profile: COST
- Billing Type: [ ]
- Billing Location: Customer Only (dropdown)
- Bankruptcy:
- Suppress Billing:
- Suppress Past Due Billing:
- Suppress Auto Fin Charge:
- Dispute:
- Dispute Reason: [ ]
- Collection Cycle: [ ]
- Electronic File Type: [ ]
- File Prefix: [ ]

At the bottom, there is a toolbar with buttons: Save, Undo, Insert New Line, Insert Copied Line, and Edit with Grid.

6. In the Secondary Navigation Panel, click **1099 Reporting Information**.

- M. Enter appropriate taxpayer related information.
1. In the **Address** field, enter **1001 South IH 35**.
  2. In the **City** field, enter **Round Rock**.
  3. In the **State** field, enter **TX**.
  4. In the **Zip Code** field, enter **78664**.

The screenshot shows a software window titled "1099 Reporting Information" with a sub-header "Taxpayer ID Number: 265392000". At the top, there is a table with the following data:

Taxpayer ID Number	Name	Taxpayer ID Number Type	1099 Reportable
265392000	Dell Computer_300	EIN	Yes

Below the table are navigation buttons: "From 1 to 1 Total: 1", "First", "Previous", "Next", "Last", and "Go to line: [ ] Go". A "List View" button is also present.

The main form area has three tabs: "Taxpayer Information" (selected), "1099 Backup Withholding", and "Certification". The "Taxpayer Information" tab contains the following fields:

- Vendor/Customer: VC000000262
- Dell Computer\_300
- Taxpayer ID Number: 265392000
- Taxpayer ID Number Type: EIN
- Detailed TIN Type: [ ]
- Name: Dell Computer\_300
- Names: [ ]
- Address: 1001 South IH 35
- City: Round Rock
- State: TX
- ZIP Code: 78664
- Last Name: [ ]
- Name Control: DELL
- 1099 Backup Withholding Status: [ ]
- 1099 Reportable:
- Bypass Address Validation:

5. In the Secondary Navigation Panel, click **Certification**.
- N. Select the Vendor and Customer active status.
1. Click the **Insert New Line** button.
  2. In the **Vendor Active Status** drop down menu, select **Active**.
  3. In the **Vendor Approval Status** drop down menu, select **Complete**.
  4. In the **Customer Active Status** drop down menu, select **Active**.
  5. In the **Customer Approval Status** drop down menu, select **Complete**.

6. Click **Save**.

**Certification** Legal Name: Dell Computer\_300 Vendor Active Status: Active Customer Active Status: Active

Legal Name	Vendor Active Status	Customer Active Status
Dell Computer_300	Active	Active

From 1 to 1 Total: 1 [First] [Previous] [Next] [Last] Go to line:  Go

Vendor/Customer: VC000000262  
Dell Computer\_300

**Certification Status**

Vendor Active Status: Active [v]  
Customer Active Status: Active [v]  
Vendor Approval Status: Complete [v]  
Customer Approval Status: Complete [v]  
Vendor Reinstatement Date:  [calendar]  
Customer Reinstatement Date:  [calendar]

O. Validate and Submit the document.

1. Click the **Validate** button to check for errors. If any errors exist, correct the errors then click the **Validate** button again. If the validation is successful, the following message is displayed in the upper left corner of the screen: **“Document validated successfully.”**

2. Click the **Submit** button to submit the document to workflow for approval. The following message is displayed in the upper left corner of the screen: **“Document submitted successfully.”**
3. Click **Home** in the Primary Navigation Panel to return to the Home Page.

## 2.5. Create a Miscellaneous Vendor/Customer Record

On the Vendor Customer Creation (VCC) based document, in the Vendor Customer section, the Account Indicators tab contains a check box that flags the record as a Miscellaneous Account.

The screenshot shows the 'Account Indicators' tab with the following options:

- Restrict Use by Department:
- Miscellaneous Account:
- Internal Account:
- Inventory Customer:
- PunchOut Enabled:
- Re-PunchOut Enabled:
- Electronic Order Enabled:
- Third Party Only:
- Third Party Vendor:
- Third Party Customer:
- W-9 Received:
- Accepts Credit Cards:
- Restrict VSS Access: Yes

A Miscellaneous Account is used for a record that does not represent a specific vendor or customer. For example, it would be used for entities that wouldn't be 1099 reportable and more than likely only paid once. When using a Miscellaneous Account flagged Vendor or Customer account on documents, the user must manually enter the name and address information for the account. There is already an existing miscellaneous vendor number MISCPAYVEND that should be used as the miscellaneous vendor on payment documents, no additional miscellaneous vendors should be added.

When using a defined Vendor/Customer on documents, the information for that record will be carried forward from the Vendor Customer (VCUST) table entry. If users are required to manually enter the Vendor/Customer information on a document, they can use a Miscellaneous Account that has been set up (see Statewide Miscellaneous Vendor/Customer codes below).

Vendor/Customer				
Vendor/Customer	Legal Name	Alias/DBA	Vendor Active Status	Customer Active Status
✓ MISCCUSTOMER	Miscellaneous Customer		Inactive	Active
MISCPAVEND	Miscellaneous Vendor		Active	Inactive
MISCVNDR1	Misc Pcard Pymt Vendor		Active	Inactive

First Prev Next Last [Attachments](#)

## 2.6. Addition of Vendors from ProcureAZ

When vendor records are created or updated in ProcureAZ, an interface document (VCCPZ1) is created which will update the information in the Vendor/Customer (VCUST) table in AFIS. All vendors who are

registered in ProcureAZ should make all of their changes in ProcureAZ and not directly in AFIS. The Vendor/Customer code assigned in AFIS will display in ProcureAZ as the “Alternate ID” for the vendor.

## 2.7. Research Updates

---

The Vendor Customer (VCUST) table stores all of the records for both vendors and customers used in AFIS. The information entered on any of the Vendor Customer Creation (VCC) based documents can be seen in the sections and fields on the VCUST table.

### ACTIVITY 2.7

#### Research a New Vendor on the Vendor Customer Table

##### Scenario

You have created a new vendor record in AFIS, and now you want to verify that the record has been successfully added to the Vendor Customer (VCUST) table.

##### Setup

- ✓ User is logged into the AFIS Home Page.

##### Steps

- A. Navigate to the Vendor Customer table using the Jump to feature.
  1. In the **Jump to** field, enter **VCUST**.
  2. Click **Go**. The VCUST table opens. A Search popup window opens.
- B. In the Search popup window, search for a vendor record.
  1. In the Search window, in the **Legal Name** field, enter **Dell Computer\_xxx**, where xxx is your Student Number.

2. Click **Ok**. The Vendor/Customer table displays the record.

**Vendor/Customer** [Menu](#)

1. In the **General Info** tab, observe the Company Name field value.
  2. In the **Organization** tab, observe the Organization Type field value.
  3. In the **Address** section, observe the Address Types that exist for the record.
  4. Click **Home** on the Primary Navigation Panel to return to the Home Page.

## 3. Modify an Existing Vendor/Customer Record

---

### Learning Objectives

---

In this lesson, you will:

- Examine the components of the Vendor/Customer Modification document
- Review the data entry requirements for the Vendor/Customer Modification document
- Create a Vendor/Customer Modification document
- Examine the ProcureAZ interface process for vendor modification
- Research the updates made to the Vendor/Customer and Customer Account Options tables by the Vendor/Customer Modification document

### Lesson Overview

---

The Vendor Customer Modification (VCM) based document is used to add to, change, or delete existing vendor and customer information stored in AFIS. Only one Vendor/Customer can be updated by the VCM document. This lesson examines the VCM document components and data entry process.

### 3.1. Vendor/Customer Modification Document

---

Vendor/Customer Modification (VCM) based documents allow users to modify or add to an existing vendor or customer record. Changes submitted through a VCM based document only apply to a single record. Some examples of when a VCM based document should be used include the following:

- Modifying Organization or Prenote/EFT information
- Adding a new address for an existing Vendor/Customer record
- Modifying an existing address
- Modifying a vendor's Legal Address or other 1099 information
- Adding 1099 Reporting Information for a new Taxpayer ID number
- Modifying an existing record's Legal Name
- Creating an Active vendor when an Active customer already exists, or vice versa

To create or change a Customer Account record, make changes directly in the Customer Account Options (CACT) page. In the CACT you can:

- Add a new Customer Account record
- Modify an existing Customer Account record

Like the VCC based documents, the VCM based documents, with the exception of the VCMPZ1, are routed to workflow for approval by the department and by GAO, and they cannot reference or be

referenced by any other document in AFIS. The VCM based documents cannot be copied, nor can they be modified once the Phase is Final.

## Line Action

Within the VCM based document itself, the information is slightly different from the VCC based document. On each line, the Line Action drop down menu allows users to choose what type of action is being done, whether it is adding, modifying, or deleting information on a record.

The screenshot displays a software interface with two tabs: 'General Information' and 'Location Information'. The 'Location Information' tab is active. A 'Line Action' dropdown menu is open, showing 'Modify' and 'Delete' options. Below the dropdown, the 'Headquarters' field is greyed out. Other fields include 'Headquarters Legal Name', 'Catalog DUNS #', 'Catalog Extended DUNS', 'Web Address http://', '1099 Indicator', 'Taxpayer ID Number' (with a house icon), 'Taxpayer ID Number Type' (dropdown), 'TIN Updates All Locations' (checkbox), 'Franchise Account' (checkbox), and 'Legal Name Changed' (checkbox).

The tabs and fields available for data entry on the document depends on what Line Action is selected. For example, if a new address is being entered, the Line Action is set to New, and the Add New Address tab is used, while the fields on the Modify Existing Address tab are greyed out.

### 3.2. Vendor Customer Modification Document Components

The Vendor Customer Modification (VCM) based document has many components, or sections, that relay detailed information to the Vendor Customer (VCUST) table. Depending on the type of information that requires modification, only certain sections may be used. For each section except the Header, users must click Insert New Line, and select a Line Action that determines how the Vendor/Customer record is being modified.

#### Header

The Header section contains fields that allow the user to specify general information that applies to all sections of the document. The Vendor/Customer that is selected in the General Information tab is the Vendor/Customer whose information is being modified by the document. The Header section is used to change the Legal Name associated with the record.

The screenshot displays the 'Header' section of a software application. At the top, there is a title bar labeled 'Header' and a 'List View' button. Below the title bar is a tabbed interface with five tabs: 'General Information' (selected), 'Legal Name Change', 'Extended Description', 'Document Information', and 'Rejection Reasons'. The 'General Information' tab contains the following fields and controls:

- Vendor/Customer:** A text field containing 'VC000000169' with a small green house icon to its right.
- Legal Name:** A text field containing 'Dell-100'.
- Headquarters Code:** A text field containing 'VC000000169' with 'Dell-100' displayed below it.
- Document Name:** A text field with a dropdown arrow on the right.
- Record Date:** A text field with a calendar icon to its right.
- Document Description:** A text field with a dropdown arrow on the right.
- Tracking Number:** A text field.
- Prefix:** A text field.
- VSS-Initiated:** A checkbox.
- Changes Rejected:** A checkbox.
- Never Archive:** A checkbox.

## Headquarters

The Headquarters section contains fields that allow the user to modify or delete information for the Headquarters record associated with the Vendor/Customer record.

## 1099 Reporting Information

The 1099 Reporting Information section is used to add to, modify, or delete existing taxpayer information for the Vendor/Customer record.

## Master Address

The Master Address section is used to add a new, auto-generated Master Address to the Headquarters record, or modify/delete an existing Master Address. Once a Line Action is selected, the tabs for adding a new Master Address or modifying an existing Master Address are used to specify a Master Address code, and the information is entered on the Address Information tab of the Master Address section.

## Address Information

The Address Information section is used to add a new address type or modify/delete an existing address for a Vendor/Customer record. It is also used to add to, modify, or delete Contact Information for the record.

**Address Information** Total Lines: 0 Line Action: none Address ID: none Address Type: none

Line Action	Address ID	Address Type	Street 1	City	State/Province	Zip/Postal Code	Principal Contact	Additional Address Info.
-------------	------------	--------------	----------	------	----------------	-----------------	-------------------	--------------------------

From 0 to 0 Total: 0 First Previous Next Last

**Add New Address** | [Modify Existing Address](#) | [Address Information](#) | [Other Address Information](#) | [Prenote/EFT](#) | [Remittance Advice](#) | 

[Contact Information](#) | [Contact Address Information](#) | [Geographic Designation](#)

New Address Type:  New Address ID:    
Auto-Generate:

## Customer Account

The Customer Account section is used only when working with an existing customer account or adding customer information to an existing vendor record. A new customer account can be added to the record by selecting a Billing Profile and completing the Customer Account Information tab. An existing customer account can be modified or deleted by selecting a Billing Profile on the Modify Existing Customer Account tab and completing the Customer Account Information tab.

The screenshot shows the 'Customer Account' interface. At the top, it displays 'Total Lines: 1' and various fields for Vendor/Customer, Legal Name, Billing Profile, Dept, Unit, and Address ID. Below this is a table with one line item. The table has columns for Line Action, Vendor/Customer, Legal Name, Billing Profile, Dept, Unit, Billing Type, and Address ID. Below the table, there are navigation buttons (First, Previous, Next, Last) and a 'Go to line:' field with a 'Go' button. The main form area contains a 'Line Action' dropdown menu and a 'Vendor/Customer' text input field. On the right side, there is a 'List View' button. At the bottom, there are four tabs: 'Add New Customer Account', 'Modify Existing Customer Account' (which is currently selected), 'Customer Account Information', and 'Third Party Options'. Below the tabs, there are input fields for 'Billing Profile', 'Dept', and 'Unit'.

## Contacts

The Contacts section is used to add a new contact or modify/delete an existing contact for the Headquarters record.

The screenshot shows the 'Contacts' interface. At the top, it displays 'Total Lines: 0' and fields for Line Action, Contact ID, Contact Name, Phone, and Email. Below this is a table with zero line items. The table has columns for Line Action, Contact ID, Contact Name, Phone, and Email. Below the table, there are navigation buttons (First, Previous, Next, Last) and a 'From 0 to 0 Total: 0' indicator. The main form area contains a 'Line Action' dropdown menu and a 'Headquarters' text input field. On the right side, there is a 'List View' button. At the bottom, there are four tabs: 'Add New Contact' (which is currently selected), 'Modify Existing Contact', 'Contact Information', and 'Address Information'. Below the tabs, there are input fields for 'Contact ID' and 'Auto-Generate' (with a checkbox).

## Commodity

The Commodity section is used to add or delete a commodity that is provided by the vendor. This is optional.

## Certification

The Certification section is used to modify the Vendor/Customer record certification status as active or inactive and to modify the approval status of the Vendor/Customer.

### 3.3. Vendor Customer Modification Document Data Entry

On the Vendor Customer Modification document, the individual sections are only used if changes are required for that section. After selecting a record to modify, users can Insert a New Line on each section that requires modification. The most common modifications are changes to address, status, and creation of additional addresses.

#### Header

##### *General Information*

On the General Information tab, the Vendor/Customer field will be populated with the Vendor/Customer code if the document is created by clicking the Modify Existing Record link at the bottom of the Vendor/Customer (VCUST) table. Otherwise, select the Vendor/Customer code using the Pick List. In the Header, General Information tab, the following fields are available:

- **Document Name** – Enter a name for the document, this field is optional
- **Document Description** – Enter a clear description of the document, this field is required
- **Extended Description** – Enter more description if necessary, this field is optional

General Information	Legal Name Change	Extended Description	Document Information	Rejection Reasons
Vendor/Customer: VC000000169 				
Legal Name: Dell-100				
Headquarters Code: VC000000169				
Dell-100				
Document Name: <input type="text"/>				
Record Date: <input type="text"/> 				
Document Description: <input type="text"/>				
Tracking Number: <input type="text"/>				
Prefix: <input type="text"/>				
VSS-Initiated: <input type="checkbox"/>				
Changes Rejected: <input type="checkbox"/>				
Never Archive: <input type="checkbox"/>				

### Legal Name Change

The Legal Name Change tab on the Header is used in combination with the Headquarters section when modifying either a vendor or a customer name. When modifying a company, the Company Name field is used. When modifying an individual, any of the fields can be used.

The screenshot shows a software interface with a tabbed menu at the top containing 'General Information', 'Legal Name Change', 'Extended Description', 'Document Information', and 'Rejection Reasons'. The 'Legal Name Change' tab is selected. Below the tabs, there are several input fields: 'Organization Type' is a dropdown menu with 'Company' selected; 'Company Name' is a text box containing 'Dell-100'; 'First Name', 'Middle Name', and 'Last Name' are empty text boxes.

### Headquarters

#### General Information

When modifying the name of a vendor or customer, a new line is inserted on the Headquarters section with a Line Action of Modify, and Load Values selected. This enables the Header Legal Name Change modification.

The screenshot shows a software interface with a tabbed menu at the top containing 'General Information' and 'Location Information'. The 'General Information' tab is selected. Below the tabs, there are several input fields: 'Line Action' is a dropdown menu; 'Headquarters' is a text box containing 'VC000000169'; 'Headquarters Legal Name' is a text box containing 'Dell-100'; 'Catalog DUNS #' is an empty text box; 'Catalog Extended DUNS' is an empty text box; 'Web Address http://' is an empty text box; '1099 Indicator' is an empty text box; 'Taxpayer ID Number' is an empty text box with a small green icon to its right; 'Taxpayer ID Number Type' is a dropdown menu; 'TIN Updates All Locations' is a dropdown menu; 'Franchise Account' is an unchecked checkbox; and 'Legal Name Changed' is an unchecked checkbox.

## Vendor/Customer

### General Information

The General Information tab on the Vendor/Customer section is used in combination with the Authorized Department section when restricting a vendor to use by certain departments. By checking the Restrict Use by Department check box, the vendor can only be used by departments listed in the Authorized Department section. Only in very special circumstances will this be used, almost all vendors should be available for statewide use.

<b>General Information</b>	Headquarters	Organization	Disbursement Options	Prenote/EFT	Remittance Advice	Vendor Terms
Accounts Receivable	eMALL	Location Information	Summary of Approval Modifications	Executive Compensation		
Additional Information	Travel

## 1099 Reporting Information

### Modify Existing Taxpayer

When updating the Legal Name for a vendor’s 1099 reporting information, in the 1099 Reporting Information section, the user first clicks Insert New Line, sets the Line Action to Modify, and then clicks Load Values.

Add New Taxpayer	<b>Modify Existing Taxpayer</b>	Taxpayer Information	1099 Backup Withholding	Certification
Summary of Approval Modifications				

Existing Taxpayer ID Number:	<input type="text"/>	Existing Taxpayer ID Number Type:	
		Existing Detailed TIN Type:	

The Taxpayer ID Number that requires modification is selected on the Modify Existing Taxpayer tab, before navigating to the Taxpayer Information tab.

### Taxpayer Information

When the Legal Name change is applied to the 1099 Reporting Information and Load Values is selected, the Taxpayer Information Name field will update.

The screenshot shows the 'Taxpayer Information' tab selected in a software interface. The interface includes a navigation bar with tabs: 'Add New Taxpayer', 'Modify Existing Taxpayer', 'Taxpayer Information' (active), '1099 Backup Withholding', and 'Certification'. Below the navigation bar is a 'Summary of Approval Modifications' section. The main form area contains the following fields and controls:

- Name: [Text Input]
- Last Name: [Text Input]
- Names: [Text Input]
- Name Control: [Text Input]
- Address: [Text Input]
- Chg affects Prev Yr:
- City: [Text Input]
- 1099 Backup Withholding Status: [Dropdown Menu]
- State: [Text Input] with a state selection icon (green arrow pointing up)
- 1099 Reportable:
- ZIP Code: [Text Input]
- Bypass Address Validation:
- Withholding Allowance: [Text Input]

### Master Address

The Master Address section is used when modifying either vendor or customer account master addresses.

### Modify Existing Master Address

On the Modify Existing Master Address tab, the user first clicks Insert New Line, sets the Line Action to Modify, and then clicks Load Values. The Address ID field is used to select the Address that requires updating before navigating to the Address Information tab within the Master Address section.

The screenshot shows the 'Modify Existing Master Address' tab selected in the software interface. The navigation bar includes tabs: 'Add New Master Address', 'Modify Existing Master Address' (active), 'Address Information', and 'Geographic Designation'. The main form area contains the following field:

- Address ID: [Text Input] containing 'AD001' with a state selection icon (green arrow pointing up)

### Address Information

The Address Information tab is used to modify the address fields with the correct information for the Address ID selected on the Modify Existing Master Address tab.

### Address Information

The Address Information section is used when adding a new address type on the Add New Address tab, or modifying and deleting information associated with an address type through the Modify Existing Address tab.

### Modify Existing Address

The user cannot update the physical address on this tab. It is grayed out for the user. The physical address associated with an ID is updated on the Master Address tab. Here is where you can add a new billing address for example and associate it with an ID, or update contact information on an existing address type. You can also delete an existing address type.

### Address Information

The Address Information tab is used to view the address information for the Existing Address ID selected on the Modify Existing Address tab.

Add New Address	Modify Existing Address	<b>Address Information</b>	Other Address Information	Prenote/EFT	Remittance Advice
Contact Information	Contact Address Information	Geographic Designation			
Street 1:	1001 South IH35	Country Phone Code:	1	Phone:	512-728-4100
Street 2:		Phone Extension:		County:	MAR
City:	Round Rock	County Name:	Maricopa	Country:	USA
State/Province:	TX				
Zip/Postal Code:	78664				
DUNS:					
Extended DUNS:					
CAGE Code:					

### Authorized Dept.

#### Add New Department

When restricting a vendor to specific departments, on the Add New Department tab, the user first clicks Insert New Line, and then clicks Load Values. In the Department field, the Pick List is used to select the department. The Authorized By field can also be completed using the Pick List. This will rarely be used; almost all of the vendors should be able to be used Statewide.

Line Action:	New	
Vendor/Customer:		List View
Add New Department	Delete Existing Department	
Department:		
Authorized By:		

## Certification

### Certification Status

When a vendor or customer record status needs to be changed, the Certification Status tab is used. The user first clicks Insert New Line and then clicks Load Values. The Active Status and Approval Status fields for either the vendor or customer account can then be updated to the correct value.

Certification Status		Summary of Approval Modifications	
Vendor Active Status:	Inactive	Customer Active Status:	Inactive
Vendor Approval Status:	Incomplete	Customer Approval Status:	Incomplete
Vendor Reinstatement Date:	<input type="text"/>	Customer Reinstatement Date:	<input type="text"/>

### 3.4. Modify a Vendor/Customer Record

When a request is received to modify the information on a Vendor/Customer record, the Vendor/Customer (VCUST) table can be used to locate the record and create the Vendor/Customer Modification (VCMD1) document by clicking the Modify Existing Record link.

### ACTIVITY 3.4

## Modify a Vendor/Customer Record

### Scenario

The State of Arizona wants to purchase 1000 new laptop computers from the computer manufacturer, Dell. You know that Dell is already an established vendor in AFIS and requires updates for new address details. Before creating a delivery order, the vendor’s new address needs to be added. You will use the VCUST table to locate the record and create a Vendor/Customer Modification (VCMD1) document to make the necessary updates to the account.

### Setup

- ✓ User is logged into the AFIS Home Page.

### Steps

- A. Navigate to the Vendor/Customer table.
  1. In the **Jump to** field, enter **VCUST**.
  2. Click **Go**. The VCUST table opens. A search popup window opens.
- B. Search for the record that requires updating.
  1. In the Search window, in the **Legal Name** field, enter **Dell Computer\_xxx**, where xxx is your Student Number.
  2. Click **Ok**. The Vendor/Customer table opens with the record displayed.

Vendor/Customer	Legal Name	Alias/DBA	Vendor Active Status	Customer Active Status
VC000000169	Dell-100		Active	Active
✓ VC000000170	Dell Computer-200		Active	Active
VC000000200	Dell-200		Inactive	Inactive

- C. Navigate to the Address Information section and create a VCMD1 document.
  1. In the Secondary Navigation Panel, click **Address**.
  2. At the bottom of the screen, click **Add New Address**.

3. In the Create Document window, select the VCMD1 Document on the grid, in the **Document Department Code** field, enter **xxx**, your student number.
4. Check the **Auto Numbering** check box.
5. Click **Create Document**. The VCMD1 document opens.
6. In the Header, in the **Document Description** field, enter **New Address**.

D. Enter new address data.

1. In the Document Navigation Panel, click **Address Information**.
2. From the **New Address Type** drop down menu, select **Other**.
3. Check the **Auto-Generate** check box.

4. Click the **Address Information** tab.
- E. Add the new address information.
1. In the **Street 1** field, enter **155532 E. Railroad Drive**.
  2. In the **Street 2** field, enter **Suite 3055**
  3. In the **City** field, enter **Dallas**.
  4. In the **State** field, enter or select **TX**.
  5. In the **Zip Code** field, enter **99992**.
  6. From the **Country** Pick List, select **USA**.
  7. Click **Save**.

- F. Validate and Submit the document.
1. Click **Validate** to check for errors. If any errors exist, correct the errors and click **Validate** again. If the validation is successful, the following message is displayed in the upper left corner of the screen: **“Document validated successfully.”**
  2. Click **Submit** to submit the document to workflow for approval.
  3. Click **Close**.
  4. Click **Home** in the Primary Navigation Panel to return to the Home Page.

### 3.5. Modification of Vendors from ProcureAZ

When vendor records are created or updated in ProcureAZ, an interface document (VCMPZ1) is created which will update the information in the Vendor/Customer (VCUST) table in AFIS. All vendors who are registered in ProcureAZ should make all of their changes in ProcureAZ and not directly in AFIS.

### 3.6. Research a Vendor/Customer Record

Updates made by modification documents can be researched on the Vendor/Customer (VUCST) table and Customer Account Options (CACT) table.

### ACTIVITY 3.1

## Research a Vendor/Customer Record

### Scenario

After processing the updates on a customer account record, you want to verify the changes have been made on the VCUST and CACT tables in AFIS.

### Setup

- ✓ User is logged into the AFIS Home Page.

### Steps

- A. Navigate to the Vendor Customer table using the Jump to feature.
  1. In the **Jump to** field, enter **VCUST**.
  2. Click **Go**. The VCUST table opens. A Search popup window opens.
- B. In the Search popup window, search for a vendor record.
  1. In the Search window, in the **Legal Name** field, enter **Dell Computer\_xxx**, where xxx is your Student Number.
  2. Click **Ok**. The Vendor/Customer table displays the record.

Vendor/Customer	Legal Name	Alias/DBA	Vendor Active Status	Customer Active Status
VC000000169	Dell-100		Active	Active
✓ VC000000170	Dell Computer-200		Active	Active
VC000000200	Dell-200		Inactive	Inactive

## 4. Vendor Hold and Customer Dispute Tracking

### Learning Objectives

In this lesson, you will:

- Review the vendor hold process
- Review the customer account dispute process

### Lesson Overview

In AFIS, vendor accounts may need to be placed into a hold status for specific departments. Customers may need to be marked as being in dispute. These designations can be temporary in nature. This lesson reviews these processes and the document options that are used to update the necessary accounts.

#### 4.1. Vendor Hold Process

The Vendor Hold Process refers to the process of preventing new spending with a vendor account or holding a payment. A Vendor/Customer Modification document is used to set either the Hold Payment option or the Prevent New Spending option. The Vendor/Customer section, Disbursement Options tab contains fields for both options.

The screenshot shows the 'Disbursement Options' tab in the AFIS system. The form is divided into two main columns of fields. On the left, there are fields for 'Category' (PYCN), 'Description' (Payment Consolidation Tes), 'Default Type' (2), 'Default Priority' (99), 'Default Format' (WAR), and 'Default Format Description' (Warrant Payment). Below these are 'Scheduled Payment Day', 'Single Payment Indicator' (unchecked), and 'Name on Check' (Legal Name). On the right, there is a 'Hold Payment' checkbox (checked), a 'Hold Payment Authorized By' field, a 'Hold Reason' text area, a 'Prevent New Spending' dropdown menu, a 'Third Party Code' field, a 'Third Party Name' field, a 'Third Party Approved By' field, a 'Third Party Approved On' field, a 'Third Party Reason' text area, an 'Always Infer Third Party Vendor' checkbox (unchecked), and a 'Third Party Address ID' field. Each text input field has a small green and red arrow icon to its right, likely for saving or refreshing the data.

Prevent New Spending can be activated for specific departments or all departments. When specific departments are required, the Prevent Spending section of the Vendor/Customer Modification document is used to add or remove departments from the list of departments that cannot spend with the vendor.

## 4.2. Customer Dispute Tracking

A customer account can be flagged as in dispute and a reason for the dispute can be entered on the Vendor/Customer Modification document in the Customer Account section. This process will update the respective fields on the Customer Account Options (CACT) table. When selecting the check box for Dispute on the Customer Information tab of the Customer Account section, the Dispute Reason is a required field.

The screenshot shows the 'Customer Account Information' tab of a software interface. The form is divided into two columns. The left column contains: 'Address ID' (text input with a green up arrow icon), 'Billing Type' (text input), 'Final Statement' (text input), 'Billing Location' (dropdown menu), and 'Collection Cycle' (text input with a green up arrow icon). The right column contains: 'Bankruptcy' (checkbox), 'Suppress Billing' (checkbox), 'Suppress Past Due Billing' (checkbox), 'Suppress Auto Fin Charge' (checkbox), 'Dispute' (checkbox, checked), 'Dispute Reason' (text input), 'Bill Parent' (text input), 'Electronic File Type' (dropdown menu), 'File Prefix' (text input), and 'Central Statement' (checkbox).

Flagging a customer account as in dispute will not populate the dispute fields on the Header or Accounting line of existing Receivable (RE) documents. This will have to be done manually. It will also not prevent finance charges from applying to late receivables or the automatic liquidation of open Accounting lines via Auto Apply for the selected customer account.

## 5. Vendor ACH Data

### Learning Objectives

In this lesson, you will:

- Identify the vendor ACH/EFT data in the Vendor/Customer table

### Lesson Overview

Vendors can provide originally or update GAO with their ACH/EFT data by submitting a paper form to GAO for data entry on a Vendor/Customer Creation – ACH (VCCE1) document or Vendor/Customer Modification - EFT (VCME1) document. Only authorized users will be able to use the VCCE1 or VCME1 documents or see the fields that these documents update on the Vendor/Customer (VCUST) table.

#### 5.1. Identify Vendor ACH/EFT Data

On the Vendor/Customer (VCUST) table, for a selected vendor, the Vendor/Customer section Prenote/EFT tab will display the bank account and routing information used for payments. The Bank Account number will be masked.

The screenshot displays a web form titled "Prenote/EFT" with the following fields and values:

- Generate EFT Payment:
- ABA Number: 011000015
- Bank Name: [Redacted]
- Account Type: Checking
- Account Number: 12341234
- Routing ID Number: 1234
- Prenote Requested Date: [Redacted]
- Prenote Return Reason: [Redacted]
- Prenote Return Reason Message: [Redacted]
- Foreign Correspondent Bank Name: [Redacted]
- Foreign Correspondent Bank Branch Country Code: [Redacted]
- EFT Format: CCD
- EFT Format Description: [Redacted]
- EFT Status: Prenote Requested
- Last Status Change: [Redacted]
- EFT Status Description: [Redacted]
- Prenote Return Reason Explanation: [Redacted]
- Foreign Correspondent Bank Identification Number Qualifier: [Redacted]
- Foreign Correspondent Bank Identification Number: [Redacted]

The information in this section can be updated by creating a Vendor/Customer Modification - EFT (VCME1) document with the fields on the Prenote/EFT tab completed with the information received from the vendor on the paper form. Only select individuals at GAO will have security to the (VCME1) document.

The screenshot shows the 'Prenote/EFT' tab in the AFIS system. The 'Generate EFT Payment' checkbox is checked. The ABA Number is 011000015, Bank Name is FEDERAL RESERVE BANK, Account Type is Checking, Account Number is 12341234, and Routing ID Number is 1234. The EFT Format is set to CCD, with a description of EFT CCD+. The EFT Status is 'Prenote Requested'. There are also fields for Prenote Return Reason and Prenote Return Reason Message.

## 5.2. Verify ACH/EFT Information

Vendor/Customer Modification documents can be created by selecting the desired record in the Vendor/Customer (VCUST) table and clicking the Modify Existing Record link. The updates can be tracked on the VCUST table.

### ACTIVITY 5.2

#### Enter Vendor ACH/EFT Information

##### Scenario

Apple Inc. has called to ensure that they provided the proper information when their account was initially established in AFIS. This information was entered on a Vendor/Customer Modification – EFT (VCME1) document.

##### Setup

- ✓ User is logged into the AFIS Home Page.

##### Steps

- A. Navigate to the Vendor/Customer table.
  1. In the **Jump to** field, enter **VCUST**.
  2. Click **Go**. The VCUST table opens. A search popup window opens.
- B. Search for the record that requires updating.
  1. In the Search window, in the **Legal Name** field, enter **Apple Inc.**

- Click **Ok**. The Vendor/Customer table opens with the record displayed.

Vendor/Customer				
Vendor/Customer	Legal Name	Alias/DBA	Vendor Active Status	Customer Active Status
✓ APPLE INC.	Apple Inc.		Active	Inactive
APPLE-100	Apple Inc.		Inactive	Inactive
APPLE-101	Apple Inc.		Inactive	Inactive
APPLE-200	Apple Inc.		Active	Active

First Prev Next Last [Attachments](#)

- Search for the Prenote/EFT section in the Vendor/Customer component of the VCUST page.
  - By default, the General Info section of the Vendor/Customer page displays.
  - In the Secondary Navigation Panel, click **Prenote/EFT**.
  - The Prenote/EFT section is displayed. In the **Generate EFT Payment** check box, verify that the check box is checked.
  - In the **ABA Number** field, verify that **011000138** is entered.
  - In the **Bank Name** field, verify that **Bank of America, N.A.** is entered.

## TERMINOLOGY

The terms listed in Table 1 are used throughout this training guide.

**Table 1: Terminology**

Term	Description
Electronic Funds Transfer (EFT)	The electronic movement of data between banks which results in a fund transfer between bank accounts.
Primary Navigation Panel	A menu at the top of the screen that allows quick navigation to specific pages via Jump to, Home, and Help icons.
Record	Individual entries in tables that contain the related information for the entry.
Reference Table	Used to store information within the system
Secondary Navigation Panel	A menu that changes depending on what type of page the user is on. The Home Page includes standard options and access to History and Favorites. Multi-page tables include menus to navigate through sections of a table. Documents include menus to navigate through sections and features of a document.
Taxpayer ID Number (TIN)	The number used by the Internal Revenue Service to identify taxpaying entities.
Vendor/Customer	In AFIS, vendors and customers are established and maintained within the same Vendor/Customer table (VCUST). A vendor can also be a customer allowing a user to enter information only one time when a particular contact is both a vendor (payable) and a customer (receivable).
Vendor/Customer Code	The unique identifier assigned to the Vendor/Customer.
Vendor/Customer Creation (VCC) Document	A document used to add new records to the Vendor/Customer (VCUST) table, 1099 Reporting Information (1099I) table, and the Customer Account Options (CACT) table. The VCC based documents (VCCD1, VCCE1 and VCCG1) that are created in AFIS are routed through workflow for approval. The vendor records created in ProcureAZ will integrate to AFIS to create a final VCCPZ1 document.
Vendor/Customer Modification (VCM) Document	The VCM based document is used to modify or add to an existing vendor or customer record. This document is used to update Vendor/Customer table information, Customer Account Options table information, and 1099 Reporting Information table information. The VCM based documents (VCMD1, VCME1 and VCMG1) that are created in AFIS are routed through workflow for approval. The vendor records modified in ProcureAZ will integrate to AFIS to create a final VCMPZ1 document.
Vendor/Customer (VCUST) table	The primary repository for vendor and customer information. Records may be defined for use as a vendor, a customer, or both. Records are added to this table through a Vendor Customer Creation (VCC) based document and modified through a Vendor Customer Modification based (VCM) document.

	Multiple VCC & VCM documents are available depending on the user establishing the vendor or customer.
